

Release note | AXiS 64 Firmware Updater

1 | AXiS 64 Firmware Updater Vn1.0

- ☐ Automatic update from Internet.
- ☐ Update '.zip' file from hard drive (or external media connected to the machine).
- ☐ Operation on both PC & Mac platforms.
- ☐ Installation utilities for both PC & Mac platforms.
- ☐ Programming status bar.

Notes

- ☐ Automatic update looks at: <http://www.c-thru-music.com/support/AXiS-64/Firmware/> for '.zip' files that begin with 'AXiS-64_'
- ☐ After the 'AXiS-64_' the next 3-digits are assumed to be a version number (e.g. 3.2) & are used to take highest versioned (i.e. latest) update '.zip' file for automatic update.
- ☐ Inside the update '.zip' file there is assumed to be a directory with the same name as the '.zip' file, inside of which are the files to be programmed.
- ☐ There can be any number of files contained within the update directory, but the following assumptions are used to identify the different processor files:
 - ☐ The main processor file begins with: 'Mcon'
 - ☐ The function key processor file begins with: 'Mfunc'
 - ☐ The key processor file begins with: 'Mkey'
- ☐ The AXiS 64 Firmware Updater does not require all of the above files to be contained within the update '.zip' file. However, the software will program any files, matching the criteria above. An obvious minimum requirement is at least one file contained with the update '.zip' file.
- ☐ When downloading update '.zip' files from the hard drive (or external media), the name of the '.zip' file is not constrained as above (e.g. It can be named NewFirmware.zip). However, the structure inside the '.zip' file must remain as above.
